

Ukraine's War of Survival Summary

12/12/2023 by Mark Taylor

Territorial Land Battle For possession
GRIDLOCKED with 20% of Ukraine occupied.

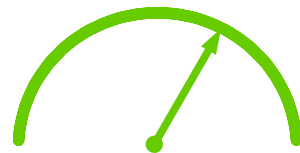

Viability of Ukraine as a functioning state. Access to Black sea, ability to trade via Black Sea v. Russian Navy. Joining EU can massively help this, and smooth path to NATO membership eventually. THIS MAY WIN THE PEACE AND MAY BE THE ONLY BEST OPTION.

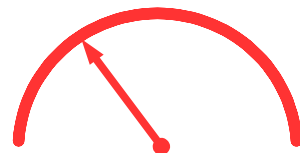

The Deep Battle to destroy and disrupt Russian Infrastructure, Arms, Fuel, and Logistics via SBU / HUR Direct Action inside Russia proper and occupied territories.

Battles of Attrition of Russian equipment as #1 priority, economy #2, personnel #3, plus morale follows these and is important because it might unseat Putin / end the war. Winning on attrition may render Russia unable to continue and eventually cause collapse.

Russia was losing the "Information-War" of influence recently very successful at mobilizing corruption, useful idiots, repeaters, crazies, far-right groups, and bad leaders (Polish Truckers, Hungary, MAGA in USA, danger lurks also in Serbia, Netherlands etc., plus China feeling able to back more openly.

Supply of Arms and Munitions. Ukraine was winning this battle, but MAGA / Russia Caucus has back-stabbed them. Throwing viability of matching Russian supplies into doubt.
