

BOOSTING UK AND EU GROWTH TO FUND INCREASED DEFENCE BUDGETS

Dear PM Sir I recommend to declare the war on the continent of Europe a National Emergency in light of the changed status quo of NATO realities that must be faced. In concert with EU leaders especially Germany France and Poland. To return to cooperation to provide a temporary mix of pre BREXIT harmonized standards in the UK and EU technicality waivers where necessary there. So that flows of UK EU trade can be immediately boosted in both directions. Sufficiently to provide an emergency GDP boost. The benefits of which are to be ring fenced for the purposes of boosting defence budgets across Europe and getting our militaries into good enough order to able to deter or to defend against Russian aggression. That is quite likely coming within 3 to 10 years if Russia is not fully defeated in Ukraine. Because having gone to a war economy Putin will not be able to stop. That probably means picking off the Baltics then Poland etc. Leading to WW3. Sincerely Mark Taylor

Thank you. The Prime Minister's Office is currently receiving an exceptionally high volume of emails. If your message concerned an issue relating to the responsibilities of another Government Department or public authority then you should resend it to them. The Prime Minister's Office is, at this time, only able to consider matters directly relating to the Prime Minister and will not reply to emails that could have been dealt with elsewhere or which are of a general nature.
